

LEGACY PHARMACEUTICALS SWITZERLAND

Fill & Finishing Portfolio » Datasheet Non-Steriles

Production of oral liquids, tablets, and semi-solid pharmaceutical products

Alongside our core expertise in the manufacture of parenteral products, we also manufacture non-sterile drugs as liquids, tablets, and semi-solid formulations. We have equipment for the production and filling of syrup in glass and plastic bottles. For production and blistering of our tablets, we have equipment for wet or dry granulation with subsequent pressing.

For the production of semi-solid drugs, we are able to manufacture common formulations (creams, salves, pastes and gels) and fill aluminum tubes. For secondary packaging, we offer a broad spectrum of fully automated packaging equipment, all the way up to customer-specific manual packaging.

Dose Form	Manufacturing Process	Maximum Capacity (annually)
	Tube filling (1 mL to 10 mL)	Up to 20 million
	Tablets	Up to 500 million
	Bottle filling (30 mL to 100 mL)	Up to 10 million
